Utah City Social Coach

Product brief · Utah City Intelligence Platform · October 2026

What it is. A new leader-only page in the existing platform that acts as an automated social media manager. It reads how Utah City's official accounts (TikTok, Instagram, YouTube, Facebook, LinkedIn, X) are performing, joins that with **tour feedback** and **Social Pulse** public sentiment, and gives the team a short weekly list of specific things to try. **AI proposes; a person edits and posts.** The tool never publishes anything.

Access. Anyone with the existing **leader** role. No new role, no new login, no separate permissions: it sits behind the same middleware that already gates the leadership dashboard.

Keeping it human

Rule	How the product does it
Draft, never post	No write access to any platform. A named person publishes every post.
Named humans, real faces	Every idea says who is on camera (host, builder, resident). Logos and voiceovers are the exception.
Lo-fi and specific	Ideas default to phone video under 15 minutes. Voice Check flags 'thrilled to announce' phrasing and rewards names, places and numbers.
Speed with a licence	A moments feed flags timely opportunities (a viral comment, a construction milestone, a tour today) so one person can post the same day.
Honest	Public skepticism from Social Pulse (traffic, 'who will live there') gets plain answers, not spin.
Consent	Guest quotes and faces only with consent captured at the tour. No AI-generated people or invented testimonials.

What proven campaigns teach

Case	Lesson	Utah City version
Duolingo (TikTok)	One empowered person with a distinct voice, reacting same-day (reported 50K to 16M+ followers, The Drum 2025).	Make the city under construction a character; one fast-approve owner.
Wendy's (X, TikTok)	A recurring ritual (Roast Day: 111 videos, 109M+ views on TikTok, HubSpot) and reading the room.	'Ask a Builder Anything' day each month.
Ryanair (TikTok)	Joke about your own reputation, never the customer (follower figures are blog-sourced).	'Yes, it's a construction site.' Name the skepticism first.
Pure Michigan	Tie social to the business goal; curate guest photos (about 3,489 likes per photo vs about 510 destination average, Skift).	Curated tour-guest photos with credit; measure tour requests.
Inspired by Iceland	Real locals named Guðmundur answered visitors' questions on camera (267M impressions; the campaign's own figure).	**'Ask a Utah City Host'**: tour hosts answer public questions on video.

Most case-study figures are self-reported or from blogs, so they are used for patterns, not as promised results.

Starter content pillars

Building it live (hard-hat POV, same-spot Friday time-lapse) · **Tour reactions** (the 'wait, I can walk to the train?' moment) · **Ask a Host** (hosts answer real comments) · **Walk with me** (FrontRunner to the lake, natural sound) · **Honest hour** (answers to recurring skepticism) · **Neighbors** (first businesses and residents).

Key metrics

Layer	Metrics
Discovery	Views, non-follower reach %, follower growth rate
Resonance	Share rate, save rate, comment rate, engagement rate; video watch time and completion

Layer	Metrics
Community	Median human reply time, % of questions answered, comment sentiment (Social Pulse)
Conversion	Profile link clicks, UTM site sessions, tour requests from social
Authenticity health	% posts with a named person on camera, % lo-fi, Voice Check score, posts per week

Industry per-follower engagement benchmarks vary widely by source (Socialinsider 2026: TikTok about 2.7%, Instagram about 0.45%, Facebook about 0.15%, X about 0.10%), so the Coach benchmarks Utah City against its own baseline and median post. Priority platforms: TikTok, Instagram Reels, YouTube Shorts; then Facebook and LinkedIn; X last (metered API cost).

Features

- **Weekly brief:** scorecard across platforms, what worked and why, what flopped, and 3 to 5 ideas for the week.
- **Idea engine:** each idea has a hook, who is on camera, effort level, the data behind it (tour quote, public question, top post) and a draft caption in Utah City's voice.
- **Moments feed:** time-sensitive prompts with an expiry, capped by a weekly spontaneity budget.
- **Voice Check:** scores any draft against the Utah City voice guide and explains the flags; never blocks.
- **Reply desk:** clusters public questions, drafts short replies, routes hard ones to a host or developer rep.
- **Experiment log:** tag an idea with a hypothesis; the system records the verdict against the account median.

How it fits the platform

- **Connectors** in a new `src/server/social/owned/` (one per platform, read-only OAuth), separate from the public-listening providers.
- **Domain logic** in `src/domain/social-coach/`; new Postgres tables (owned accounts and encrypted credentials, daily metrics, ideas, drafts, experiments, briefs) using the existing self-migrating repository pattern.
- **Jobs:** a new `owned-sync` mode on the existing social-pulse cron (daily) and a Monday brief run. **AI:** existing `generateObject` setup with schema-validated output.
- **UI:** a leader-only Coach page (scorecard, brief, ideas, moments, replies, experiments) behind the current middleware.

Roadmap

Phase	Scope
0 (weeks 0-2)	Marketing team creates API keys (companion guide); 90-minute voice workshop; verified baseline for all six accounts.
1 (weeks 2-5)	Connectors, daily sync, cross-platform scorecard.
2 (weeks 5-8)	Baselines, weekly brief, idea engine joined to tour feedback and Social Pulse, Voice Check.
3 (weeks 8-12)	Moments feed, reply desk, experiment log, host capture checklist with consent.

Timing is a planning estimate. TikTok and LinkedIn approvals are outside our control. Decisions needed: who owns weekly approvals, which metrics leadership cares about, and the guest-consent wording.
